EDUCATION

Ateneo de Manila University

Expected May 2028

Bachelor's of Science in Computer Science

EXPERIENCE

R&D Data Scientist

June 2026 – Present

Quartz Labs - London, United Kingdom

- Helped clients focus only on consumer trends worth acting on by building a quality-control layer that narrowed **86k** social posts and **17k** detected trends across **5** platforms down to the strongest signals
- Gave clients evidence they could trust the product's picks by showing its best filter flagged trends that went on to grow **1.65x** faster, validated across **2** clients
- Uncovered real trends the system had been missing by fixing a data-collection imbalance, growing validated results **6x**, and stopped a **\$2,100** overspend by auditing platform billing

Software Engineer Intern

July 2026 – Present

Swarm - Makati, Philippines

- Cut back-and-forth between the team and legal by building an internal tool that puts **2,700+** legal and policy requirements in one searchable place, each linked to its exact source
- Made the tool practical to run by reducing a key processing step from **3.4M** comparisons to **6,406**, turning a job that couldn't run at all into one that finishes in about an hour
- Helped the team find what actually applies to them, surfacing **87** relevant requirements where keyword search found **15**, backed by **2,100+** explained connections between related rules

Web Development Deputy

Dec 2025 – April 2026

TEDxAteneoDeManilaU - Manila, Philippines

- Gave attendees a clear sense of the event and its talks before they arrived by designing and building a theme-driven website with engaging visuals and smooth interactions
- Made key details easy to find by putting **90%** of essential event information in the site's first section
- Made signing up easier by simplifying forms and navigation, bringing registration down to **3 clicks**

PROJECTS

S1napse

Nov 2025 - May 2026

Personal Project

- Built a desktop app that turns live racing-sim and real-car data into driving feedback, combining **6** data sources into one view of **40+** live readings updated **60** times per second
- Gave drivers coaching tips within a second of each corner, such as braking and cornering analysis, and shipped it as a signed Windows installer that updates itself

entroscope

May 2026

Personal Project; 2.8k downloads, 18 stars on PyPI

- Published an open-source Python library that lets analysts apply **7** entropy measures to time-series data in just a few lines of code
- Turned an early-warning signal from my own trend-detection work into a reusable tool, backed by **14** test suites and automated testing so others can depend on it

bigfiles

May 2026

Personal Project; 186 downloads, 14 stars on crates.io

- Built a Rust tool that shows what's filling up your disk and finds duplicate files, with repeat scans about **40x** faster (**0.45s** to **0.011s**) thanks to caching
- Made cleanup safe with an interactive terminal app that sends files to the trash instead of deleting them, shipped ready to run on Linux, macOS and Windows

SKILLS

Languages and Frameworks: JavaScript (ES6+), TypeScript, Python, Java, Rust

Libraries and Tools: React, Next.js, Node.js, PostgreSQL, Drizzle ORM, Neon, Supabase, TailwindCSS, OpenAI/LLMs, Git, Vercel, Cloudflare, Excel, Powerpoint
